

# MUSTAFA ÖZBİR

## Software Test Automation Engineer

I have excellent **problem-solving**, **attention to detail**, and **analytical thinking** skills as a software test automation engineer. Thanks to these qualities, I help customers meet with a better quality and bug-free application.

In my work experience to date, I have had the opportunity to **take initiative and lead** when necessary. My **communication skills** have also improved because of **working with teams**.

I am also **motivated** by **learning** and **research**. I take trainings and seminars to become a better equipped individual in the field of testing and quality, and I will continue to do so in the future.

## WORK EXPERIENCE

### Softalya Yazılım | Antalya

#### Software Test Automation Engineer

July 2023- On Going

In my current position, I am doing manual and automation testing. I write manual test cases and do manual testing. Then I automate my tests suitable for automation. I use **Java**, **Selenium**, **Page Object Model** and **Cucumber BDD** in test automation. For my **GraphQL** Api tests, I use the **RestAssured** library. Although **Trello** was used when I started working, we are currently using **Jira** for bug reporting and project management. I also tested the mobile part of our application, which is an ecosystem. We work with **Agile Scrum** methodology. We carried out our work effectively with daily meetings, sprint planning and retro meetings.

#### Business Analyst

Before my position as a test automation engineer, I supported my company as a business analyst for a short time. During this period, I supported the **scrum master** by utilizing my previous knowledge during the company's transition to the **Agile Scrum** methodology. I contributed to the preparation of the **Product Requirements Document** containing the **user stories** and **acceptance criterias** by obtaining the necessary information from the **product owner** for our application under development. I also did wireframe creation by using **Miro** for a new application to be developed.

### Softalya Yazılım | Antalya

#### Intern Manuel Tester

May 2023- July 2023

Since there was no test culture in my company before and there was no test engineer before, I first did **exploratory testing**. During this period, I **created tickets in Trello** for **errors** and **offered improvement suggestions** by examining similar applications.

### Diligent Libraries Project

#### Software Test Automation Engineer

Oct 2022- April 2023

I wrote my test cases through User story. I executed these test cases on **Jira**. I automated my **smoke**, **end to end (e2e)** and **positive/negative tests** using **Java**, **Selenium** and **Cucumber BDD**. We worked on **github** with my **teammates**. I did my api tests on **Postman**. I also automated my api scenarios using **RestAssured** Library. For a short time, I did database testing using **JDBC** and performance testing using **Jmeter**. In all these processes, we worked by adopting **Agile Scrum** methodology.

#### E-Commerce Manager

Nov 2018- Jan 2023

For 3 years, I worked as an e-commerce manager in marketplaces. During this time, my **problem solving skills**, **critical thinking** and **decision making skills** increased. In addition, since it is a sector with continuous development, it has become easier for me to **adapt to different things**. Finally, being in constant contact with customers also played an important role in the development of my **communication skills**.
